

IS Projects Ideas

General Guidelines:

- Teams composed from 6-7 students.
- Each Program should satisfy its requirements (documented below)
- Use Files to read or store your Data (file-based systems)
- Any Code written without understanding will allow student to get **Zero** in project discussion

All Ideas must have these operations:

- Add Operation
- Delete Operation
- Search Operation
- List Operation
- Authentication (login and register) and Role Management (manage 2 user types)

1- Vaccination scheduling System

Project description:

Vaccination in Egypt can be done by Ministry of health special vaccination units. Vaccination Registration is tedious to manage manually, so there was a need for a program that can automate this whole process.

System must:

1. 2 User Roles: (Admin, Users)
2. Admin can:
 - Login to the system. his profile information: (Id, name, email, password)
 - Add or remove Vaccination center. Each center has (Id, Name, Address, list of vaccines)
 - Search in Vaccination center by its name
 - List registered users on the system and if they have reservation for a vaccine or not
 - Accept reservation and decide a date for user to get vaccination.
3. User can:
 - Register his information in the system (Id, name, email, password, phone number, national id)
 - After login, user can see Vaccination centers list.
 - Reserve vaccination: each reservation has (user id, vaccination center id, vaccine name)
 - See his vaccination date after accepting from admin

2- Freelance System

Project description:

A lot of work can be done remotely these days, so your dreams of working from your couch can come true by developing a freelance program to manage all of these.

Client: person who posts job description in order to hire freelancer

Freelancer: person who needs a job (who send a proposal for a job)

System must:

2. 2 User Roles: (Freelancer, Clients)

3. Client can:

- Login to the system. his profile information: (Id, name, email, password)
- Add (write) or remove job posts. Each post has (Id, Title, job description, list of required skills)
- List registered freelancers on the system and if they send a proposal for specific job post or not.
- Accept or reject proposal sent by a freelancer and send acceptance/rejection to the chosen freelancer.

4. Freelancer can:

- Register his information in the system (Id, name, email, password, phone number, national id)
- After login, freelancer can see all job posts list.
- Search in job posts by Title
- Send a proposal. Each proposal has (freelancer id, job post id, skill name (which he is perfect in))
- See if his proposal has been accepted or not from the client

3- Quiz management system

Project description:

Quiz Management System helps the professors to communicate easily with students. To allow students to solve quizzes more easily than before, to do so, we need a quiz management system.

System must:

1. 2 User Roles: (Professor, Student)
2. Professor can:
 - Login to the system. his profile information: (Id, name, email, password)
 - Add or remove quizzes. Each quiz has (Id, Title, list of questions ids). Each question has (id, question, list of answers).
 - List registered students on the system and if they send an answer for specific quiz or not.
 - Give a score to answers sent by a student for specific quiz and send the score back to the student.
3. Student can:
 - Register his information in the system (Id, name, email, password, level, age)
 - After login, student can see all possible quizzes list.
 - Search for quiz by its Title
 - Send a quiz answers. Each answer has (student id, quiz id, list of questions' answers)
 - See his quiz score after sending it from professor.

4- Cinema Booking System

Project description:

Cinema booking system is a system for E-booking where cinema vendor can offer their available movies and allow customers to book/register certain movie easily from home.

Cinema vendor: person who adds movies

System must:

1. 2 User Roles: (Vendor, Customers)
2. Vendor can:
 - Login to the system. his profile information: (Id, name, email, password)
 - Add Each movie has (Id, Title, movie description, list of available movie seats)
 - List registered Customers on specific movie (who booked the movie)
 - If movie seats number is over (last seat is booked by a customer), the movie should be removed from movie's available list
 - Accept book request sent by a customer and send back ticket number.
3. Customer can:
 - Register his information in the system (Id, name, email, password, phone number, national id)
 - After login, customer can see all possible movies (which has available seats only).
 - Search for a movie by Title
 - Send book request. Each book request has (customer id, movie id, seat number)
 - See movie ticket number which is sent by vendor.

Best Wishes
